**PROFESSIONAL SERVICES**

## *Development*

## Product Customisation

Standard “off-the-shelf” software rarely fulfils clients' precise requirements. Changing needs and evolving processes often mean that modifications need to be made or specialised applications need to be written to cater for these circumstances. The Konica Minolta Professional Services development team has specialised knowledge of all Konica Minolta products and offers cost effective software solutions, from revising current systems, to implementing end to end solutions.

## Product Integration

The Konica Minolta Professional Services development team ensures that Konica Minolta products can be adapted to work seamlessly with an existing infrastructure.

These products can be integrated into SAP, Unix, Oracle and AS400, to mention a few. In addition, we work with third party suppliers and partners to ensure our software solutions can integrate with their products.

## Web Development

In today's business environment, an effective web presence is imperative to business development and expansion. Getting online is as essential as is keeping current websites up to date. With websites acting as the frontline for business on the Internet, it is an extremely important tool and must be developed accordingly.

Our designers are artists in their own right and can make your site stand out with dynamic flash and 3D graphic imaging
